Precipitation probability					
80%	70%	60%	60%	40%	40%

Forecast for Wednesday 21 Dec 2022

Weather: Frequent showers or longer periods of snow and rain through to late morning, heavy at times in the west bringing the risk of hail and thunderstorms. This combined with gales and blizzards bring potentially hazardous conditions for higher peaks. Snow level 400-500m at first, gradually lifting from late morning and through the afternoon as showers ease a little and some limited brighter spells develop.

Chance of cloud-free hill tops above 800m: Initially 10% or less in west, 40% for east, becoming late afternoon 40% and 70% respectively

Low cloud and visibility: Good becoming moderate or poor in rain, very poor in snow, virtually nil within cloud with bases beginning extensive in west broken in east above 500m, before improving into the afternoon
